Idea 1

Description:

This project is a comprehensive job vacancy platform that integrates a powerful backend API, two distinct frontend deployments, and a Telegram bot. The backend scrapes job data from various websites, stores it in a PostgreSQL database, and serves it via an API to both frontends and the Telegram bot. The Streamlit frontend offers an interactive, Python-driven interface for exploring job vacancies, while the traditional web frontend provides a responsive HTML/CSS/JavaScript interface. The Telegram bot enables users to query job vacancies in real-time, providing a seamless and user-friendly job search experience across multiple platforms.

Problems Solved:

Fragmented Job Listings: Job vacancies are scattered across various websites, making it difficult for job seekers to find opportunities efficiently.

Lack of Unified Platform: No single platform in Azerbaijan combines job vacancies from multiple sources, creating a cumbersome search process for the 6.9 million working-age people in the country.

Limited Access for Employers: Companies struggle to reach a broad audience with their job postings, limiting their ability to find suitable candidates.

Inefficient Job Search: Job seekers spend significant time and effort visiting multiple websites to find job listings that match their qualifications and interests.

Real-Time Updates: Job seekers lack access to real-time updates about new job vacancies, delaying their application process.

Advantages:

Advantages:

- Centralized platform simplifies job search for seekers and posting for employers.
- Real-time updates enhance user experience.
- Multiple interfaces cater to different user preferences.

Disadvantages:

Disadvantages:

- High initial development and maintenance cost.
- Dependence on external data sources for scraping job listings.
- Requires continuous updating to remain competitive.

Idea 2

Description:

Our smart recruitment system utilizes cutting-edge AI technology to simplify the candidate search and interview process. It can search for candidates on LinkedIn and other relevant platforms, generate customized job requirements using AI based on various positions, and create interview questions by analyzing resumes and job positions. It also provides a customizable environment for conducting interviews and comprehensive analytics on their outcomes, including a rating system and detailed feedback for candidates. This solution is particularly useful for our local market and can significantly enhance staffing efficiency in the holding and all its subsidiaries.

Problems Solved:

- Time-consuming candidate search: Automates search across various platforms.
- Inconsistent job requirements: Uses AI to create accurate and harmonized job requirements considering current market needs.
- Inefficient interview process: Generates candidate questions considering their resumes and the requirements for the sought position.
- Lack of feedback and analytics on conducted interviews: Provides detailed analytics and feedback for both recruiters and candidates.
- Slow hiring process in subsidiaries: Creates a common talent pool for all companies within the holding, accelerating the hiring process.

Advantages:

Advantages:

- Centralized platform simplifies job search for seekers and posting for employers.
- Real-time updates enhance user experience.
- Multiple interfaces cater to different user preferences.

Disadvantages:

Disadvantages:

- High initial development and maintenance cost.
- Dependence on external data sources for scraping job listings.
- Requires continuous updating to remain competitive.

Idea 3

Description:

This project describes users a profitable search program that provides easy access to affordable proposals. The system provides a variety of platforms and online stores, automatically follows topical discounts. The intuitive interface allows you to easily find discounts in various products and services. Algorithms provide personal suggestions, taking into account the user preferences. The platform also provides notifications on new discounts, provides quick and easy access to beneficial indicators to users. An effective, convenient and economical application for users who evaluate the time and budget. This platform sends specialized proposals to customers.

Problems Solved:

This project solves a number of problems that help users find affordable offers and manage the budget. First, the automatic discount prevents time loss with a tracking system and offers users the latest offers. Personal proposals algorithms help users provide the most usage use of offers. Also, with an intuitive interface and notification system, users easily navigate and provide warning from new offers. It provides an effective and effective shopping experience for users.

Advantages:

Advantages:

- Centralizes discounts and offers from multiple sources.
- Personalization enhances user experience.
- Notifications ensure users never miss a deal.

Disadvantages:

Disadvantages:

- Requires partnerships with multiple platforms for data.
- Needs continuous updates to track new discounts.

- Potential overload of notifications for users.

Idea 4

Description:

The startup provides a comprehensive platform that serves all aspects of the relocation process, with the aim of facilitating the transition for individuals moving to Azerbaijan. The platform provides customized guidance and support to newcomers, helping them with temporary and long-term accommodations in various areas of the country and assisting them in navigating the complex legal and tax environment. Furthermore, it facilitates finding work, links users with dependable transportation alternatives such as car rentals and taxi services, and grants access to vital amenities like insurance and office spaces. By integrating these various services into a single platform, the relocation process is made more efficient, reducing stress and uncertainty for individuals starting a new chapter in Azerbaijan.

Problems Solved:

Simplifies the daunting process of relocating to Azerbaijan by offering a one-stop platform for all essential services.

Addresses the fragmented nature of relocation assistance by providing centralized access to services like housing, legal guidance, job placement, and transportation.

Mitigates the challenges of navigating a new country's bureaucracy and regulations by offering expert advice and support on migration, legal, and tax matters.

Reduces the time and effort required for newcomers to settle in Azerbaijan by streamlining access to critical services such as temporary accommodations, insurance, and office space.

Alleviates the stress and uncertainty often associated with relocation by providing comprehensive support tailored to the individual needs of each newcomer.

Advantages:

Advantages:

- Comprehensive support for newcomers reduces stress.
- Centralized platform streamlines access to multiple services.
- Customized guidance enhances user experience.

Disadvantages:

Disadvantages:

- High complexity in integrating various services.
- Requires partnerships with local service providers.
- Needs continuous updates and support for users.

Idea 5

Description:

The contract is finished, wishing to leave work, or who wanted to try in other departments, wanting to take a transition to other departments, the perfect super application created for the staff in the new business reference. Through this application, both HR and PASHA Group employees can be more convenient to work more convenient than the platform that can use a single. Recruiters will be able to evaluate a new job search

employee from Pasha Group before entering LinkedIn and a completed application. Pasha Group employees will be able to see open positions in the company belonging to any Pasha Group and will be able to send their CVs to the company's HR department by the app.

Problems Solved:

The end of December's Competo's full-time contract ends. In search of new jobs, I enter the pages of companies belonging to each Pasha Group, I appreciate the work that suits me alone or in LinkedIn, JobSearch.Az I examine single-appropriate vacancies. This vessel takes the time of the person, and the cv's sent to the cv, which is not considered. When the reward came, it is not disclosed, which does not allow to make the "minus". With the application of "Hire Me", it is overcome such problems.

1. PASHA Group has been employed in this application, which is currently established for Pasha Group employees, for the first time on the vacancy for the first time, for the first time, Pasha Group employees about hot vacancies will be. This PASHA Group will make them feel private.

2. Pasha Group will help keep the contract for employees finished or looking for innovations, and continue to continue their careers in the Pasha Group.

3. Single Recruitment will save us from searching for sites and from time to time.

4. After appealing to any vacancy, Pasha Group will be visited by Pasha Group employee's Dashboard, which is attended by the CVN, which has been visible and downloaded by CV. When the reject is the case, the work will be transferred to the app within the app. During the interview, online tests, Essay will be archived by making it out within the app when making a video call. This will ascribe Pasha Group's employment and knowledge of HR teams.

Thus, these processes will find the only recruitment in the country in Hire ME.
